Online Application Database

mbacovsk@redhat.com

Introduction

- web application designed to allow users search for, browse, comment and rate applications
- Amber
- merge
- target market

Why application database

- current fedora pkgdb is package centric
- users use applications, packages are just necessary technicality

Application

- package:application = m:n
- application ~ .desktop (so far)
- exceptions (services, cli tools)

Planed features

- search application
  - I want to do 'X' with my computer.
- application comparison
- browse application
- keep data in sync
- comments, tags, rating
- export of package tags for yum

NAVIGATION

- Packages Home
- View Collections
- View Packages
- View Bugs
- My Packages
- Orphan Packages
- Package Stats
- PackageDB Bugs

Mortimer Jones says: 4 days ago

I have to process lots of words, and Emacs is the greatest processor of words that I have ever had the pleasure of using. It has a great interface and makes a great pot of coffee.

Petra Norbit says: 1 day ago

A fine text editor that does exactly what it should and nothing that it shouldn't. Actually I would like for it to write my text as well as edit it but you can't have it all I guess. Maybe I will get a helper monkey to handle that task and let me get some fresh air.

Rachel Klavidore says: 3 hours ago

What is it with all these program names that start with "e?" E-this and E-that, it's making me ennoyed. Well I guess it's not lmacs so I shouldn't complain too much.

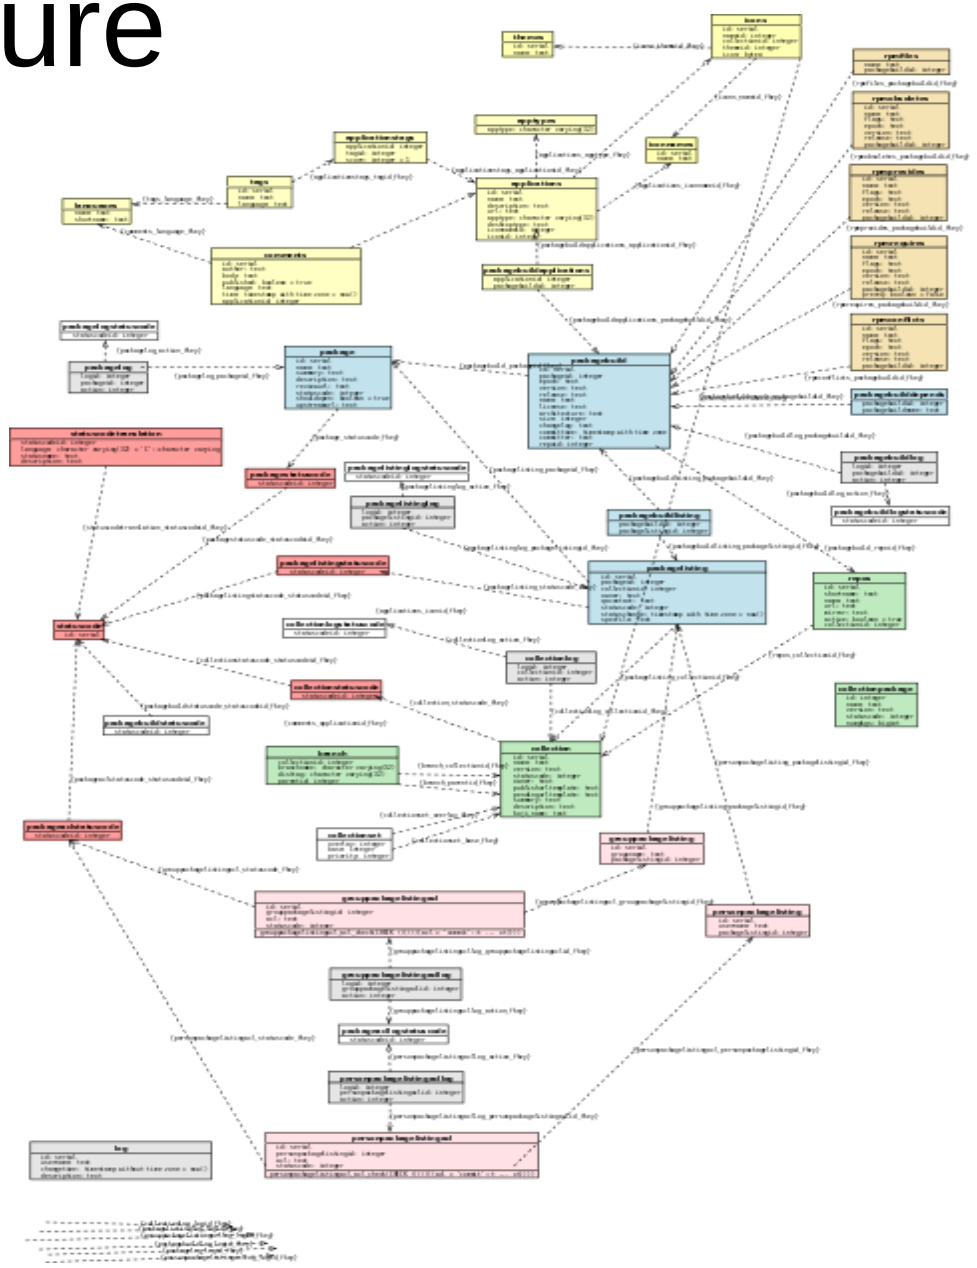
App structure

- web UI
- import script
- DB



What is done

- import script (apps, categories, icons, file lists, dependencies)
- various components (comments, tags)

What needs to be done

- put the pieces together
- search
- import script tuning (performance, better heuristics)
- tests
